CCA (Con'd)

- Sample version
 - $-\begin{array}{c} (\mathbf{Y}_1, \mathbf{X}_1), \dots, (\mathbf{Y}_n, \mathbf{X}_n) \stackrel{\mathrm{iid}}{\sim} (\mathbf{Y}, \mathbf{X}) \\ * \ \mathbf{Y}_i \ \mathrm{and} \ \mathbf{X}_i \ \mathrm{jointly} \ \mathrm{sampled} \end{array}$
 - $-n \times p \text{ matrix } \mathbb{Y} = [\mathbf{Y}_1, \dots, \mathbf{Y}_n]^{\top} \text{ and } n \times q \text{ matrix } \mathbb{X} = [\mathbf{X}_1, \dots, \mathbf{X}_n]^{\top}$
 - Sample covariance matrices

 - * $\mathbf{S}_{\mathbf{Y}} = (n-1)^{-1} \sum_{i} (\mathbf{Y}_{i} \bar{\mathbf{Y}}) (\mathbf{Y}_{i} \bar{\mathbf{Y}})^{\top}$ * $\mathbf{S}_{\mathbf{X}} = (n-1)^{-1} \sum_{i} (\mathbf{X}_{i} \bar{\mathbf{X}}) (\mathbf{X}_{i} \bar{\mathbf{X}})^{\top}$ * $\mathbf{S}_{\mathbf{Y}\mathbf{X}} = \mathbf{S}_{\mathbf{X}\mathbf{Y}}^{\top} = (n-1)^{-1} \sum_{i} (\mathbf{Y}_{i} \bar{\mathbf{Y}}) (\mathbf{X}_{i} \bar{\mathbf{X}})^{\top}$
 - Vocabulary
 - * (The kth pair of) sample canonical directions: $(\hat{\boldsymbol{a}}_k \in \mathbb{R}^p, \hat{\boldsymbol{b}}_k \in \mathbb{R}^q)$
 - * (The kth pair of) sample canonical variates: $(\mathbb{Y}_C \hat{\boldsymbol{a}}_k, \mathbb{X}_C \hat{\boldsymbol{b}}_k)$
 - * (The kth) canonical correlation: $\hat{\rho}_k$
 - Goal: find $\hat{\boldsymbol{a}}_k$ and $\hat{\boldsymbol{b}}_k$, $k=1,\ldots,r\leq p$, to maximize

$$\hat{\rho}_k = \frac{\hat{\boldsymbol{a}}_k^\top \mathbf{S}_{\mathbf{Y}\mathbf{X}} \hat{\boldsymbol{b}}_k}{\sqrt{\hat{\boldsymbol{a}}_k^\top \mathbf{S}_{\mathbf{Y}} \hat{\boldsymbol{a}}_k} \sqrt{\hat{\boldsymbol{b}}_k^\top \mathbf{S}_{\mathbf{X}} \hat{\boldsymbol{b}}_k}}$$

subject to

- while the state of the state o

- * $\hat{\boldsymbol{b}}_{k}^{\dagger} \mathbf{S}_{\mathbf{X}\mathbf{Y}} \hat{\boldsymbol{a}}_{\ell} = 0, \ \ell = 1, \dots, k-1$ Solution: Let $\widehat{\mathbf{M}} = \mathbf{S}_{\mathbf{Y}}^{-1/2} \mathbf{S}_{\mathbf{Y}\mathbf{X}} \mathbf{S}_{\mathbf{X}}^{-1/2}$

 - * $\hat{\rho}_k = \sqrt{\hat{\lambda}_k}$ is the kth largest singular value of $\widehat{\mathbf{M}}$ · $\hat{\lambda}_k$: the kth largest eigenvalue of $\widehat{\mathbf{M}}\widehat{\mathbf{M}}^{\top}$ (or $\widehat{\mathbf{M}}^{\top}\widehat{\mathbf{M}}$)
 - $* \hat{\boldsymbol{a}}_k = \mathbf{S}_{\mathbf{Y}}^{-1/2} \hat{\boldsymbol{e}}_k$
 - \hat{e}_k : the left-singular vector corresponding to the kth largest singular value of $\widehat{\mathbf{M}}$, i.e., the eigenvector corresponding to the kth largest eigenvalue of $\widehat{\mathbf{M}}\widehat{\mathbf{M}}$
 - $* \hat{oldsymbol{b}}_k = \mathbf{S}_{\mathbf{X}}^{-1/2} \hat{oldsymbol{f}}_k$
 - \hat{f}_k : the right-singular vector corresponding to the kth largest singular value of $\widehat{\mathbf{M}}$, i.e., the eigenvector corresponding to the kth largest eigenvalue of $\widehat{\mathbf{M}}^{\top}\widehat{\mathbf{M}}$

- Example: olive oil data
 - 572 olive oils
 - 10 features
 - * region indicates the general region (in Italy) of origin.
 - * area details the area of Italy.
 - * Remaining variables are continuous valued and measure the percentage composition of 8 different fatty acids

```
options(digits=4)
Y = as.matrix(dslabs::olive[,3:4])
X = as.matrix(dslabs::olive[,5:10])
p = ncol(Y)

t(B1) %*% S_X %*% B1
t(A2) %*% S_Y %*% A2
t(B2) %*% S_X %*% B2
```

- Proportion of explained correlation
 - Determining r, the number of pairs of canonical variates to retain
 - $-p \times r$ matrix $\operatorname{corr}(\mathbf{Y}, \mathbf{A}_r^{\top} \mathbf{Y})$ and $q \times r$ matrix $\operatorname{corr}(\mathbf{X}, \mathbf{B}_r^{\top} \mathbf{X})$
 - * The correlation matrix between \mathbf{Y} (or \mathbf{X}) and canonical variates
 - * $\mathbf{A}_r = [a_1, \dots, a_r] \text{ and } \mathbf{B}_r = [b_1, \dots, b_r]$
 - $\|\operatorname{corr}(\mathbf{Y}, \mathbf{A}_r^{\top} \mathbf{Y})\|_F^2/p \text{ and } \|\operatorname{corr}(\mathbf{X}, \mathbf{B}_r^{\top} \mathbf{X})\|_F^2/q$
 - * Proportion of explained correlation of \mathbf{Y} (or \mathbf{X})
 - * $\|\cdot\|_F^2$: squared Frobenius norm, i.e., sum of squared entries

```
Y = as.matrix(dslabs::olive[,3:6])
